

## SAP Profitability and Performance Management (PaPM)

# SUSTAINABILITY MANAGEMENT UND ESG REPORTING

SAP Profitability and Performance Management (PaPM) provides sample content for an Environmental Social Governance (ESG) and credit investment methodology that calculates ESG and credit scores for companies and instruments. It also rebalances portfolios based on scores and benchmark criteria.

As companies and investors place increasing importance on climate change, greenhouse gas emissions and sustainable development with ESG factors could determine the quality of traditional investment strategies. This can help to make responsible investment decisions - not only for the sake of profit, but also for the sake of our planet and the future of generations to come.

SAP Profitability and Performance Management (PaPM) is a native digital performance management solution that maintains and executes complex calculations, rules and simulations. Built on SAP HANA, the solution provides breakthrough real-time business data aggregation capabilities for SAP and non-SAP systems, a fast financial and risk calculation engine, and comprehensive simulation and scenario management.
